

Mandatory AI Usage Report

Assignment 4 — Student Support & Ticket Management

AI TOOL USED

Claude (Anthropic) — Claude Sonnet 5, in the Claude.ai chat interface with the code-execution / file-creation tool.

WHAT I ASKED AI TO DO

- Read the assignment brief (a screenshot of "Assignment 4 — Student Support & Ticket Management") and design a ticket/support system covering statuses, priorities, assignment, SLAs, ageing, ownership, resolution tracking, activity history, management visibility, and escalation/pending-action workflows.
- Build a full working prototype of that design — frontend, backend and database — and provide a step-by-step guide to run it locally.
- Improve the visual design of the frontend to look more polished and professional.

PROMPT THAT WAS MOST USEFUL

"I want a full working prototype with frontend, backend and database also guide me to run it" — this turned the written design into runnable code and a README with a run guide, in one pass.

CODE GENERATED BY AI

All of it, in this prototype: the entire backend (server.py — a Python REST API with SQLite: ticket lifecycle, SLA/ageing calculations, auto-assignment, escalation rules, pending-action logic, activity log, and a management-dashboard endpoint), the entire frontend (index.html — HTML/CSS/JavaScript single-page UI for students, staff and management), and the README.md run guide and requirement-mapping table.

CODE I MODIFIED

Changed the P1 resolution SLA from 8 hours to 4 hours in server.py (SLA dictionary), and added "convocation" as a P2 trigger keyword in prio(). Verified by raising test tickets and confirming the SLA target and assigned priority changed as expected.

AI OUTPUT THAT WAS WRONG

The first version of index.html was written to a file the app then referenced as index.html, but the working file in the project had been saved as index2.html, so the server's do_GET could not find it.

HOW I IDENTIFIED THE PROBLEM

Running the server in VS Code's terminal and opening `http://localhost:8000` produced a traceback: `FileNotFoundError: [Errno 2] No such file or directory: '..\\index.html'`. The Explorer panel showed the actual file was named `index2.html`.

HOW I FIXED IT

Renamed index2.html to index.html so it matched the path server.py opens (no restart needed, since the file is read fresh on each request); the alternative offered was to instead change the path in server.py to read "index2.html".

Notes

- This report reflects the AI side of the work accurately from the chat log.
- Deliverables produced in this conversation: server.py (backend + database schema), index.html (frontend), README.md (run guide, demo script, requirement mapping).
